The standard situation

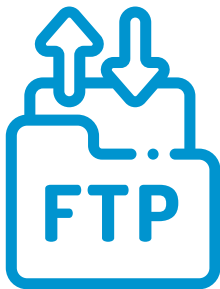

How a company works

In Germany, approximately 1 billion e-mails are sent. This makes it the most common means of communication in the company. Of course, it can also be used to send files.

Problem with sending files by e-mail:

- Often lack of security during transmission
- Sending and receiving larger files
- Missing traceability over reception

FTP (File Transfer Protocol), which dates back to 1985, is still a popular tool today for exchanging larger files or folders.

Problem with file exchange via (S)FTP:

- Increased administrative overhead
- Missing traceability of access
- Missing ease of use
- No automatic workflows

Cloud services are part of everyday life in the enterprise today. The services are available at any time and offer companies an easy way to exchange files.

Problem with file exchange via cloud:

- Intransparent data protection (GDPR)
- Missing compliance
- Depending on the provider

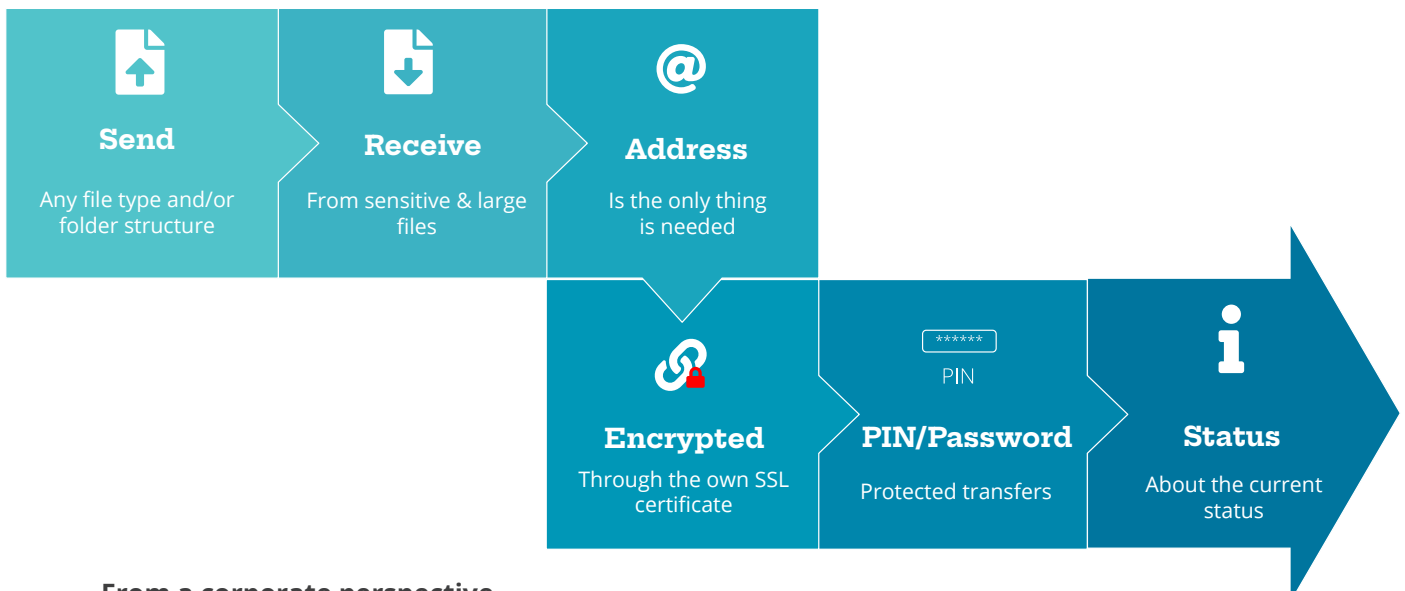

File exchange with Qiata

Share files easily, securely and traceably

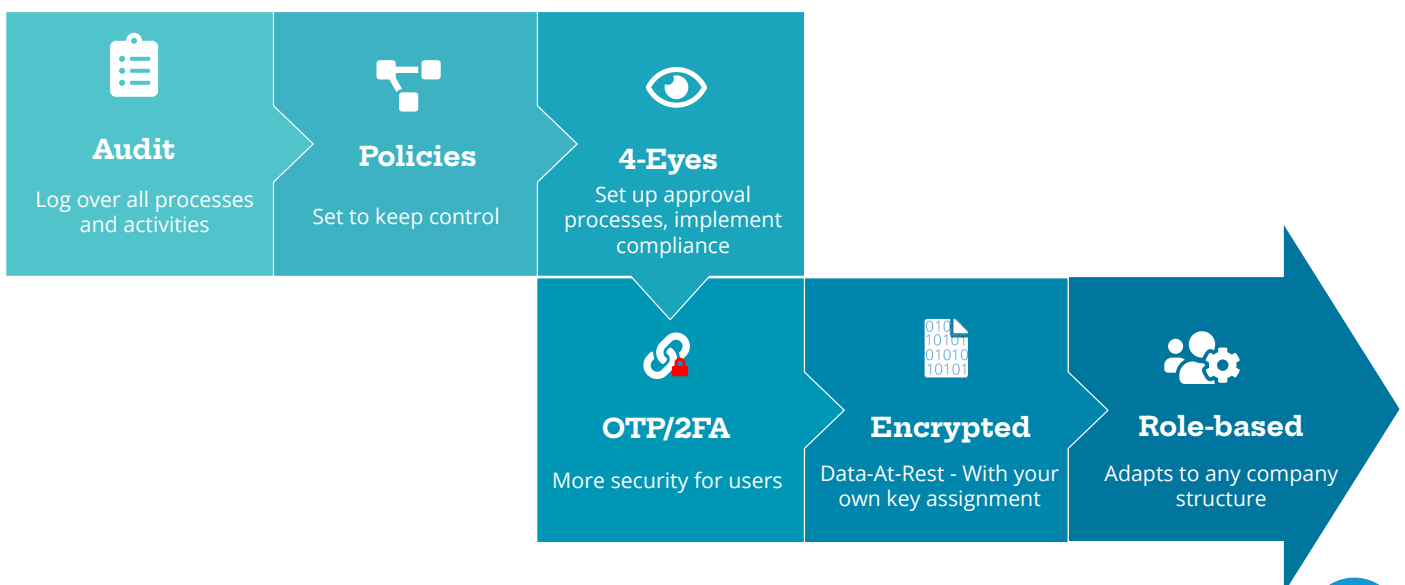

Qiata offers the customer the necessary support to deal with DIMO's in a simple, secure and traceable way. In doing so, Qiata builds on the customer's existing infrastructure and enables him and the recipient to exchange files securely. No technical know-how or additional software is required.

The Qiata scope of functions:

From the user's perspective

From a corporate perspective

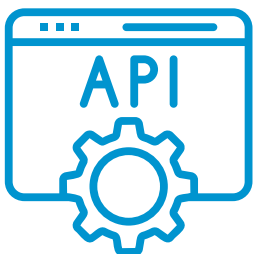

5 ways to use Qiata

Whether web browser, mail client, Outlook plugin, Windows client or directly connected to their system.

As a user you can send large files, share files and invite others to send you files via password protected links. Qiata is a user-friendly solution and can be used from any web browser.

If you use a multi-SMTP capable mail client (e.g. Thunderbird), you can configure Qiata as an outgoing mail server. This means that you can send a mail with a corresponding attachment automatically via Qiata if required. You will enjoy all the benefits that Qiata offers.

You have a system from which files / mails are sent automatically, such as CRM, ERP or a similar system? No problem! Qiata offers a versatile XML API, which makes it possible to connect Qiata with a variety of systems. For example, the automatic sending of invoices from an ERP is possible.

Qiata offers you an Outlook plug-in with which you can easily send any files or even complete folder structures encrypted via your e-mail program. Besides sending files, you can also send invitations with which your recipient can provide you with files. For this purpose, there are only 5 additional buttons on the Outlook interface.

The Secure Desktop Client (short: SDC) offers all Qiata users the possibility to send any files or even whole folder structures directly from the Windows or macOS interface. And all this MADE IN GERMANY.

SIMPLY BECAUSE, you decide how you want to use Qiata: whether via the web browser, the free Outlook AddIn or the also free desktop client for Windows and MacOS. You work regularly in your home office and on the road? PersonalSpace gives you easy access to your files with a personal storage space. No matter where, no matter when.

SECURE BECAUSE, all files are encrypted without exception and at all times at Qiata. Not only during the transfer, but also during later filing and archiving. Thanks to rights management, you are always the deciding authority as to which files may be viewed by whom, when and from where.

TRACKABLE BECAUSE, all transfer activities (except PersonalSpace) are logged and thus can be traced at any time. Every data movement is recorded securely and reliably. In the age of global digitalization, companies' network structures are increasingly expanding. As a result, the administrative challenge of keeping networks traceable at all times despite their growing dimensions is also growing at the same time. With Qiata, this is easier than ever.

FLEXIBLE BECAUSE, through the API interface already existing systems such as accounting software, ERP solutions and store systems can be connected smoothly. Problems with transfers of larger files such as videos and images with high resolution? Not with Qiata! Send even larger-than-average file formats to the desired recipients. Problem-free, fast and secure.

CUSTOMIZABLE BECAUSE, during file transfers, your corporate design is used throughout and an anonymous cloud design is not visible at any time. Through the continuous view of your corporate design with your own desired color selection even within the application (e.g. mail interface, folder view, etc.) an authentic recognition value of your company is guaranteed.

TEAMABLE BECAUSE, Qiata is not only the ideal solution for internal teamwork in a company, but also integrates external team members outside the company digitally, easily and securely into the respective processes. You decide at any time which team members, whether internal or external, may have access to which files. At the same time, with Qiata as a uniform solution, you ensure that all communication and data transfer is implemented in an audit-proof and GDPR-compliant manner.

Feature summary

An overview of core features you get with Qiata

- Simple, secure, traceable
- Compliance requirements easy to implement
